

## Orthopedic Case Management: A Case Study

**Marisa Perdomo**  
**PT, DPT, CLT-Foldi, CES**

- I. Managing a case of orthopedic edema
  - A. Patient presentation, 10 days post-op
  - B. Initial evaluation
  - C. Required reading (see bibliography)
  - D. Questions to consider
  
- II. Treatment of orthopedic edema
  - A. Answers to questions at end of Part I: Interventions commonly used in a home-health setting
  - B. Patient's progression, 7 weeks post-op
  - C. Questions to consider
  
- III. Conclusion
  - A. Answers to questions at end of Part II
    - 1. The differential diagnosis process for a patient presenting with edema
    - 2. Pathologies that need to be investigated further
    - 3. Possible intervention strategies
  - B. Patient's resolution and outline of his treatment plan

Notes

---
